### 4.Production process

**Moistureproof box configuration version**

配置

**1. The fresh air system+heating module (air cooling)**  
uses an industrial silent fan to fan the heat, and draws out the hot air in the box and sucks in the fresh air at the same time to form a circulation effect, which reduces the heat discharged by the projector in the box, and the heating module removes the fog of glass beads and dehumidifies.

**2. Fresh air system (air-cooled)+air conditioner+heating module**  
fan+air conditioner is called dual system, and it can be used on large lumen machines, and it can also be used in harsh weather environment. Besides cooling, air conditioner can also dehumidify, and the heating module can remove the fog of glass water beads to dehumidify.

## Production process materials

### Production box material

Galvanized sheet	201 stainless steel	304 stainless steel	cold-rolled plate
 <p>镀锌板</p> <p>Galvanized sheet is a commonly used material, and its thickness is 1.2-1.5-1.8, which is more rust-resistant than cold-rolled sheet.</p>	 <p>201不锈钢</p> <p>The anticorrosion effect of 201 stainless steel is worse than that of 304, and better than that of galvanized sheet, so it can be used in non-seaside wet areas.</p>	 <p>304不锈钢</p> <p>304 stainless steel is food grade, with good anticorrosion effect and high material price, which is suitable for use in the environment with serious corrosion by the sea.</p>	 <p>冷轧钢板</p> <p>Cold-rolled steel is usually used as floor cage flange, box flange, external adjustment and fixing bracket, and the thickness is usually 3-4 mm.</p>
